Text: What is a coronavirus?

Corona viruses are a family of hundreds of viruses that can cause fever, respiratory problems, and sometimes gastrointestinal symptoms too. The 2019 novel coronavirus, which is probably why you're reading this right now, is one of seven members of this family known to infect humans, and the third in the past three decades to jump from animals to humans. A pneumonia-like disease, the 2019 novel coronavirus has caused a global health emergency, sickened more than 31,000 people worldwide, and killed nearly 650 so far. Coronaviruses are divided into four genera: alpha, beta, gamma, and delta. Mostly, if you got a coronavirus, you'd end up with a cold. Coronaviruses are made up of one strip of RNA, and that genetic material is surrounded by a membrane studded with little spike proteins. (Under a microscope, those proteins stick up in a ring around the top of the virus, giving it its name—"corona" is Latin for "crown.") When the virus gets into the body, those spike proteins attach to host cells, and the virus injects that RNA into the cell's nucleus, hijacking the replication machinery there to make more virus. Infection ensues.

1. Mark True or False.

- The coronavirus causes fever.
- The 2019 novel coronavirus has caused a global health emergency.
- In Brazil there is no death caused by coronavirus
- The coronavirus sometimes causes gastrointestinal symptoms.
- Coronaviruses are a family of hundreds of viruses.

Agora leia essas dicas e tente elaborar um poster (cartaz informativo) sobre o corona vírus em Inglês.

1 - Use todo o espaço da folha;

2 - Divida a folha em 04 partes iguais;

3 - Escreva com letra bem legível, use primeiro lápis e confira se está tudo ok com a escrita. Você pode escrever em cima ou abaixo do desenho;

4 - Faça desenhos coloridos ou cole figuras;

5 - Use toda sua criatividade!

FIQUE EM CASA, MAS FIQUE LIGADO!
